

Energy that **Transforms.**

Quality that Lasts →

WHO ARE WE?

TRP Transformers is a company specialized in the manufacturing of distribution and medium-power transformers, offering reliable and efficient solutions for the electrical sector.

We operate with a strong focus on quality and sustainability, holding ISO 9001 and ISO 14001 certifications, which reinforce our commitment to process excellence and environmental responsibility.

All our transformers are certified with the Inmetro seal, ensuring compliance, safety, and performance in every product delivered.

Located in Pedranópolis, São Paulo – Brazil, TRP Transformers serves the entire national market for Distribution, Power, and Special Transformers, supplying both the private sector and energy utilities. Constantly pursuing evolution and improvement in equipment and human resources has made us one of the largest transformer manufacturers in Brazil.

ECOLOGICAL TRANSFORMERS

We offer the option of supplying transformers immersed in vegetable insulating oil, a sustainable alternative to traditional mineral oil.

In addition to contributing to environmental preservation, this choice provides several technical and operational benefits. This type of oil also extends the transformer's service life due to its high thermal capacity and chemical stability.

This initiative reflects our commitment to environmentally responsible solutions, combining energy efficiency, reliability, and sustainability.

MEDIUM-POWER (SPECIAL) TRANSFORMERS

As a reference in the segment of Distribution and Medium-Power Transformers, TRP Transformers has over 30 years of market experience, meeting the demands of various specific projects for both the private sector and electric utilities in Brazil.

We manufacture power transformers up to 10 MVA, in the classes of 15, 24.2, 36.2, 72.5, and 145 kV, fully customized according to the project requirements.

INNOVATION IS WHAT DRIVES US

PAD-MOUNTED TRANSFORMERS

The TRP Pad-Mounted Transformer is a modern and safe solution for underground distribution networks.

Designed with a shielded enclosure, resistant to weather conditions and restricted access, it provides maximum reliability, protection, and urban integration.

- Option with biodegradable vegetable oil
- Flexible configuration: Radial or Ring
- Manufactured according to national and international standards
- Reduce environmental impact and are recommended for areas with ecological restrictions

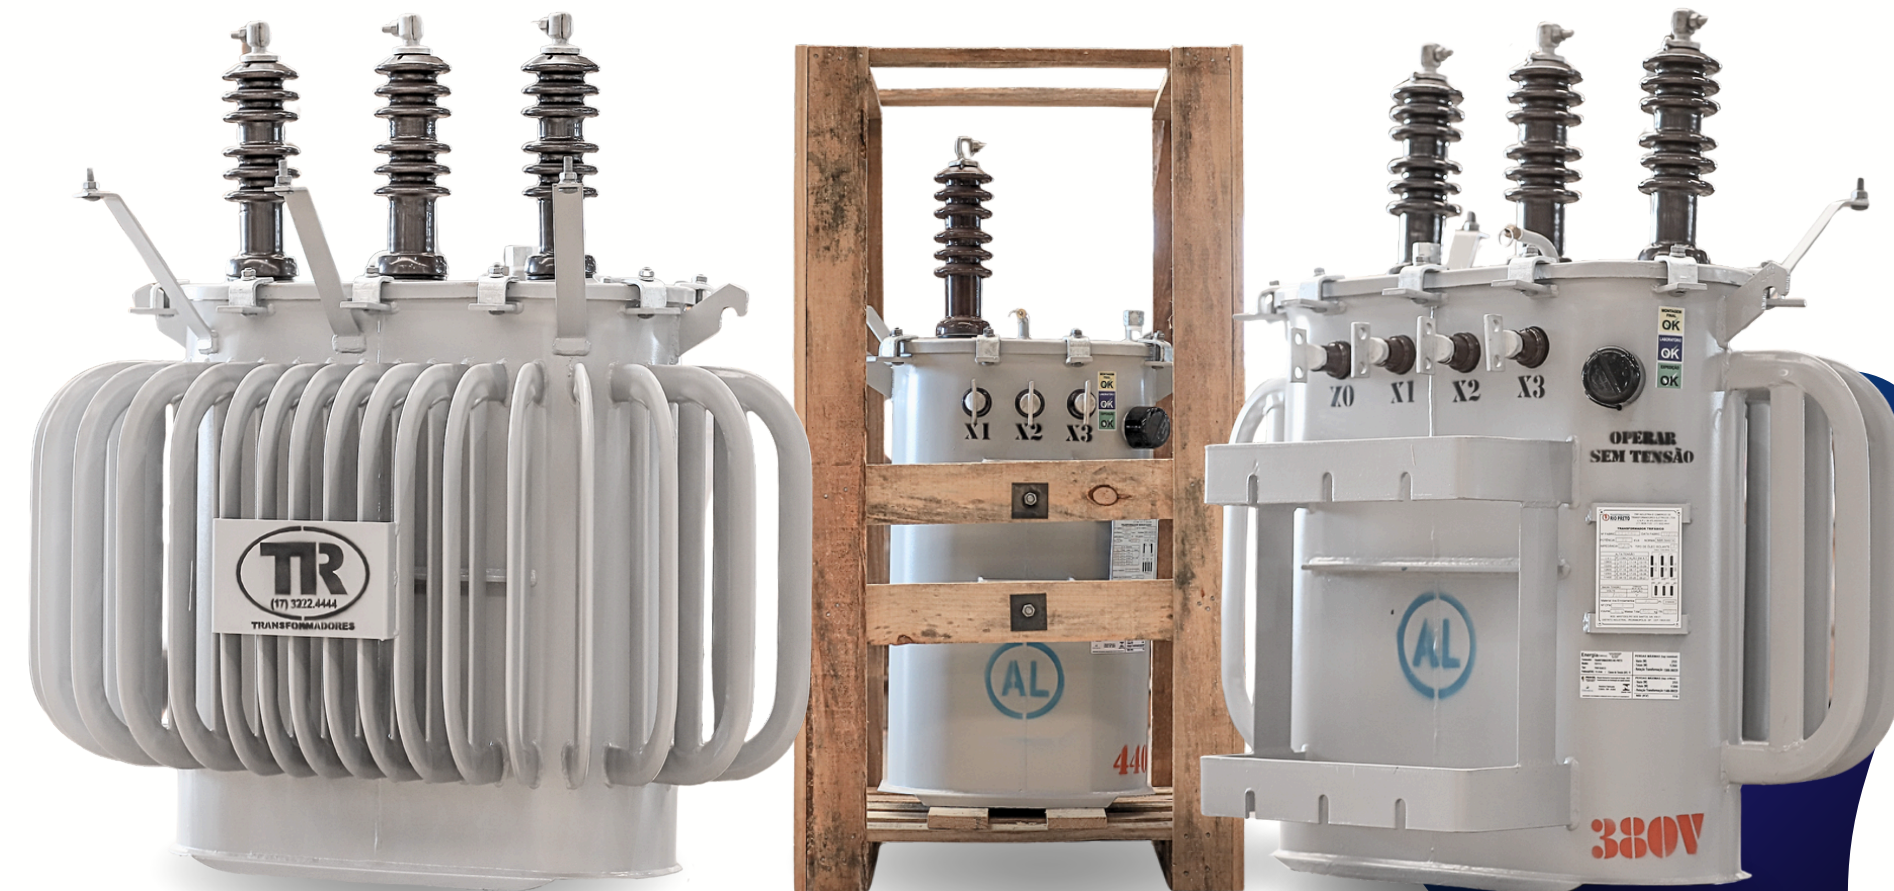

DISTRIBUTION TRANSFORMERS (Three-Phase and Single-Phase)

Single-phase transformers from 3 to 500 kVA and Three-phase transformers from 5 to 5000 kVA, in the 15, 24.2, and 36.2 kV classes, available in both 50 Hz and 60 Hz frequencies. Manufactured with high-quality materials and in compliance with ABNT and Inmetro standards. Approved by Brazilian utilities.

Applications: Industry, commerce, electric utilities, rural areas, cooperatives, etc.
